Webinar : Data visualisation for Corporate Treasurer

WEBINAR

Data visualisation for Corporate Treasurer

Webinar Outline

The amount of transactions and information that a treasury team processes is enormous. The relationship between data points are complex. All data needs to be consolidated, analysed and then presented succinctly. There should be no delays in assembling this analysis because information becomes “stale” in a rapidly changing environment.

How do you do this?

Watch this webinar where we share how users can cut, dice, extract and transform data from different sources. We'll show how the results are rendered into dashboard that helps people see and understand their data. We discuss:

- Ease of use
- Fast analysis
- Real time updates
- Publish and sharing

Webinar was recorded live on 03 July 2020 2:00pm SGT / 2:00pm BSThttps://vimeo.com/435634621
