Cloud

CS Lucas offers a Software-as-a-Service (SaaS) model that allows companies and enterprises to select treasury management services on-demand. Services are securely and economically delivered anywhere in the world over the internet. This dramatically improves the business case for companies that wish to adopt a professional treasury management solution.

CS Lucas partners with Amazon Web Services, world-class leader that help us host and deliver highly reliable, scalable, and cost-effective services to our customers.

Hosted License

By adopting a hosted license, you'll have access to a dedicated server infrastructure. CS Lucas offers hosted deployment to clients due to mandatory regulatory compliance. This is a requirement for certain financial institutions and

government agencies.

Even without a large in-house IT department, you can get access to CS Lucas' feature-rich treasury management solution while retaining full control over your corporate data.

Amazon Web Services hosts and deliver highly reliable, scalable, and cost-effective services to our customers.

On-premise License

With an on-premises license, companies can choose to install the CS Lucas financial solution within their own IT infrastructure. Companies with strict corporate security protocols and IT policies can adopt this deployment model, as it allows for full control. Validation of all third-party software data can be kept behind the corporate firewall.

CS Lucas has years of experience keeping customer deployments running smoothly. You can count on us to provide professional and reliable after-sales support for the operation and maintenance of your system.
