

Introducing CS Lucas Insight AI: Conversational Treasury Answers Inside the CS Lucas Platform

CS Lucas Insight AI brings a conversational layer directly into the platform your team already works in every day. Just ask a question in plain English, like *“What’s our cash position by bank?”*, *“Show our forecast for the next two months”*, *“Which banks are holding our deposits?”*, or *“What if SGD appreciates 1.5% against GBP?”* and get an answer back instantly, grounded in your own governed data.

Here's what that means for your team:

- **Save time:** Spend less time building reports and more time acting on what they tell you
- **Make faster decisions under uncertainty:** See the impact of market moves on your positions right away, when it still matters
- **Reduce manual effort:** Free your team from routine forecasting and data-pulling tasks
- **Stay ahead of what needs attention:** Catch pending items before they become bottlenecks
- **Trust every answer:** Get speed without sacrificing accuracy, since every figure comes from your own governed data
- **Keep full control over your data** — nothing leaves your environment or goes beyond what you're entitled to see

See it all in action in the video above and contact us directly if you have any questions.
