

# Call/ Sweep Set Up

[See previous W5 version guide](#)

## **PURPOSE**

This is a detailed procedure on how to set up relationship for call with inter-company or external counterparty and bank sweeping.

## **WHY IS THIS IMPORTANT?**

Relationship set up is required before any transactions/ activities can be booked or captured.

## **PROCEDURE**

1. From the main menu, select Transaction > Call/Sweep. Click on Set Up.
2. The following page displays.

**Call/Sweep Set Up**

4. There are three types of set up that you can create in this page. Fields marked with asterisk (\*) are mandatory.

### i. Interco Call

Select the Type as Interco Call.

Input a short name for the inter-company call set up. Give a meaningful short name based on the purpose of

creating this relationship. For example, we will set up relationship between TFS-SG and TGL-SG, we will use TFS – TGL.

Choose the principal accounting centre which would initiate the transaction. In this example, TFS-SG. If you have a default accounting centre set up, the Acct Cntr field will display the default accounting centre.

Under Entity/Grouping, choose the member for the relationship set up. It can be a single accounting centre or group of accounting centres. In this example, it will be TGL-SG. The Entity/Grouping needs to be set up before it appears in the dropdown. For instructions to do this, read

[How to Set Up Accounting Centre](#) and [Create Accounting Centre Groups and Assigning Members](#)

Select the currency for the inter-company transaction in the Ccy field.

Next, specify the Lend Ratebasis and Borrow Ratebasis if interest rates are applied for lending and borrowing transactions between the inter-company pair. Note that this is not always the case, so it can also be left blank. Lend Ratebasis and Borrow Ratebasis are user-definable set up. This is done at Set Up > User Definable > Float Basis. For more details, see [How to Create User Definable Field](#). The maintenance of the interest rates for Lend Ratebasis and Borrow Ratebasis can be done at Prices > Interest Rates > Basis Rates. See user guide on [how to maintain basis rates](#).

Note that the rates maintained for the Lend Ratebasis and Borrow Ratebasis are globally used by any relationship pair who set to the same Lend Ratebasis and Borrow Ratebasis. If one entity has different rates with each relationship pair, one can set the margin rates on top of

the Lend Ratebasis and Borrow Ratebasis. Click to see more details on how to [maintain margin rates](#).

Maturity

Tenor (Days)

Journal Lend/Borrow

Suppress Cash Flow? ☐

Under Journal Lend/Borrow field, you can choose how you wish the system to journal for accounting purposes.

Value	Remarks
Borrow	System journals based on borrow chart of account.
Lend	System journals based on lend chart of account.
None	No journals will be generated.

You can also choose to suppress the cash flow by ticking on the checkbox Suppress Cash flow. Default is not ticked.

When completed, click Create.

To complete the relationship set up, click on the tick box of the newly created relationship and click Approve on the Call/ Sweep Set Up screen.

To amend Call/ Sweep Set Up, click on the Edit button of the relationship set up to drill down to the Amend screen.

Make the amendments accordingly. Note that the Type, Short Name, Acct Cntr, Entity/Grouping, Ccy and Bank are not editable when there are already transactions booked. Delete the transactions booked under this relationship set up before amending it.

## **ii. External Counterparty Call**

To set up External Counterparty Call, from the Call/Sweep screen, click Set Up. The following page displayed.

Click on Action and select New.

Select the Type as External Ctpy Call.

Type the preferred short name. Give a meaningful short name, in this example, we will be dealing with an external company.

Choose the Accounting Centre from the dropdown.

Select the Ctpy ID and the Currency.

Next, specify the Lend Ratebasis and Borrow Ratebasis if interest rates will be applied for lending and borrowing between counterparties. Note that this is not always the case so this can be left blank.

Note that the rates maintained for the Lend Ratebasis and Borrow Ratebasis are globally used by any relationship pair who set to the same Lend Ratebasis and Borrow Ratebasis. If one entity has different rates with each relationship pair, one can set the margin rates on top of the Lend Ratebasis and Borrow Ratebasis. Click to see more details on how to [maintain margin rates](#).
