CHANGE LOG 2023 Q2

SYSTEM CHANGE LOGS

4_14_06_639 – 2 May 2023
Bug fix to set the checkbox to uncheck after clicking the Apply Selected button on the Chart of Accounts maintenance page.

4_14_06_638 – 19 Apr 2023
Bug fix to address the issue with Import Withholding Tax. Set product to 0 instead of null during withholding tax refresh. This adjustment ensures that the system can successfully return to the listing page after import, even if the product filter is not selected before navigating to the new page. When set to null, the system encounters a null pointer exception during the listing refresh after import, preventing the redirection to the listing page and the display of a successful message.

4_14_06_637 – 18 Apr 2023
Bug fix to exclude commodity and future products from Ticker Search for Assign Security Group Member, New Security Price and Security Prices listing page.
