EXCHANGE RATES

Our illustration assumes the company uses different daily exchange rates for accounting.

Average rates are computed by using the multiplier rate from trade/transaction currency to the base currency each day and averaging this over the relevant period.

The following rates were used for this illustration.

Spot Rate

Date	USD/SGD
28-Sep-11	1.234300
30-Sep-11	1.234300
1-0ct-11	1.234300
31-0ct-11	1.345600
1-Nov-11	1.345600
30-Nov-11	1.123430
1-Dec-11	1.123430
31-Dec-11	1.234220
1-Jan-12	1.234220
31-Jan-12	1.192400

1-Feb-12	1.192400
20-Feb-12	1.432300
29-Feb-12	1.452700
1-Mar-12	1.452700

Average

From Date	To Date	USD/SGD

+ Rates used for calculation are in full precision. Illustrated rates are rounded to 6dp.

In the event there is a change in the outstanding principal, the system will pro-rate the next interest payment amount (1,246,000) between the different period. Below is the calculation how the prorating is done. Essentially the weight is based on outstanding principal, interest rate and the number of days in the period. See J23, J24 and J25 for example.

Repayment Schedule

From Date	To Date	Activity	Rate	Principal	Int Capitalised	Interest	Outstanding
28-Sep-11	28-Sep-11	Drawdown	5.638890%	270,000,000.00	0.00	0.00	270,000,000.00

FREQUENTLY ASKED QUESTIONS

FAQ01. How does the system handle interest accruals at month end?

Interest accruals in CS Lucas system is reversing in nature. The interest computation at month end is always from the beginning of the trade or last interest payment date till to date. Interest accruals at month end is then reversed on the first day of the next open period.

CS Lucas system also does not have the concept of partial interest repayment. When interest is paid, all of it has to be paid. We view that if there is a partial payment of interest, then the unpaid amount must be capitalised. This follows general lending practice where all interest must be paid before repaying principal. What this means is that so long as an interest amount is paid (even 0.01), system would deem that ALL the interest to date is paid. Accrual will restart from 0 again. But if no interest is paid, when principal is paid, then the system will continue the accrual going forward.

FAQ02. How does the system handle loan revaluation at month end?

The following example illustrates how CS Lucas system calculates loan revaluation.

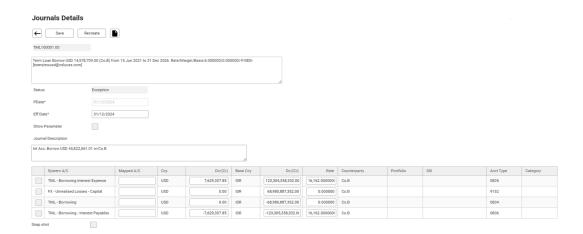

This example shows the repayment schedule of a USD loan with multiple drawdowns and repayments on different dates.

The system tracks all drawdowns and repayments, which are recorded in USD but revalued into IDR based on the accounting exchange rates on the respective value dates. At the end of the month, the system uses the accounting exchange rate on the revaluation date (e.g., 31 December 2024) to determine the revalued balance of the loan in IDR. The difference between the revalued loan

balance and the original balance in IDR gives the FX unrealized gain or loss.

The following illustrates how the system computes the loan revaluation of IDR 68,890,887,352 as of 31 Dec 2024. The accounting base currency is IDR.

The unrealized loss on the revaluation of the loan is analyzed as follows:
